Technical Dossier 2.0.0

Hospital Management Suite 2.0.0

Hospital Management Suite

Kórházkezelő rendszer

Dossier 2.0.0 · software 2.0.0 · rewrite 7 September 2026

The four-role hospital desk after the rewrite: Next.js web, .NET 8 desktop, SQLite, English identifiers, EN/SR/HU UI. Pair of dossier 1.0.0 (Bolnica freeze).

Compiled 7 September 2026

Field	Value
Title	Technical Dossier 2.0.0, Hospital Management Suite 2.0.0
Dossier version	2.0.0
Software version	2.0.0
Display brand	**Hospital** / Hospital Management Suite (cyan `#009CDE`, doctor burgundy `#630000`)
Predecessor	Technical dossier 1.0.0 / software 1.0.0 (**Bolnica**), git freeze `5b69c9c`
Rewrite	7 September 2026
Compiled	7 September 2026
Authors	Rastislav Kukučka (RA 129/2018), Mihajlo Ostojić (RA 134/2018), Laslo Uri (RA 135/2018), Milica Vučinić (RA 139/2018)
Archive remote	github.com/laslo-uri/HospitalManagementSuite
Institution	Faculty of Technical Sciences, University of Novi Sad, Computing and Control Engineering

1. Purpose

This is the **2.0.0** technical dossier. It describes **Hospital Management Suite** after the rewrite: the same four roles as 1.0.0 (manager, secretary, doctor, patient), with English identifiers, a Next.js 16 web desk, a .NET 8 WPF desktop desk, SQLite (`schemaVersion` / `SCHEMA_VERSION` **2**), hashed web auth, and EN / SR / HU UI.

It is the pair of technical dossier 1.0.0. That document is the freeze under `_legacy-1.0.0/` (branded **Bolnica**). This one is the system that replaced it for day-to-day demos.

Built and checked on 7 September 2026 on Windows. Web: `npm run check` and production build. Desktop: Release build and `--smoke` runner.

2. Identification

Item	Detail
Display name	Hospital Management Suite
Archive / course name	Bolnica (1.0.0 freeze only)
English product name	Hospital Management Suite
Serbian product name	Bolnica / upravljanje bolnicom
Hungarian product name	Kórházkezelő rendszer
Web entry	`app/` Next.js App Router

Item	Detail
Desktop entry	`desktop/HospitalDesktop/` (.NET 8 WPF)
Kind	Multi-role web app + matching Windows desktop client
UI	React 19 + Tailwind v4 (web); WPF frameless chrome (desktop)
Runtime	Node.js `>=22` (web); .NET 8 (desktop)
Persistence	SQLite — web `app/data/`, desktop local DB; seed version **2**
Auth	Web: POST login, bcrypt, httpOnly session cookie; desktop: local session after login
UI languages	English (default), Serbian, Hungarian
Visual language	1.0.0 cyan / burgundy / cream, original role icons, polished layout

3. Relationship to 1.0.0

1.0.0	2.0.0
Brand **Bolnica**, Serbian chrome	Brand **Hospital**, EN/SR/HU strings
`_legacy-1.0.0/` WPF .NET Framework 4.7.2	`app/` Next.js 16 + `desktop/` .NET 8
Nineteen JSON files under `podaci/`	SQLite + seed version 2 (~10× denser demo)
Plaintext passwords	Web: bcrypt; desktop: demo accounts with local store
Mixed Serbian identifiers	English identifiers only in new code
Single OS + in-app chrome quirks	Frameless desktop caption bar; close = sign out

The 1.0.0 tree stays runnable via `run-1.0.0.bat`. 2.0.0 does not call it. Launch 2.0.0 desktop with `run-desktop-2.0.0.bat`; web with `app/` (`npm run dev` / production start).

4. Scope

Local multi-role hospital desk: rooms and inventory, medicines review, appointments, announcements, patient self-service. Web is richer (room jobs, transfers, surveys, reminders, reschedule). Desktop mirrors the 1.0.0 four-window workflow with the same visual language.

Honest gap vs full 1.0.0: some legacy areas (vacations, hospitalizations, referrals, and a few secretary/doctor side flows) are still missing or thinner on desktop. Core four-role booking and facility loops work.

5. User interface — desktop 2.0.0

Screens captured from the .NET 8 WPF client on 7 September 2026.

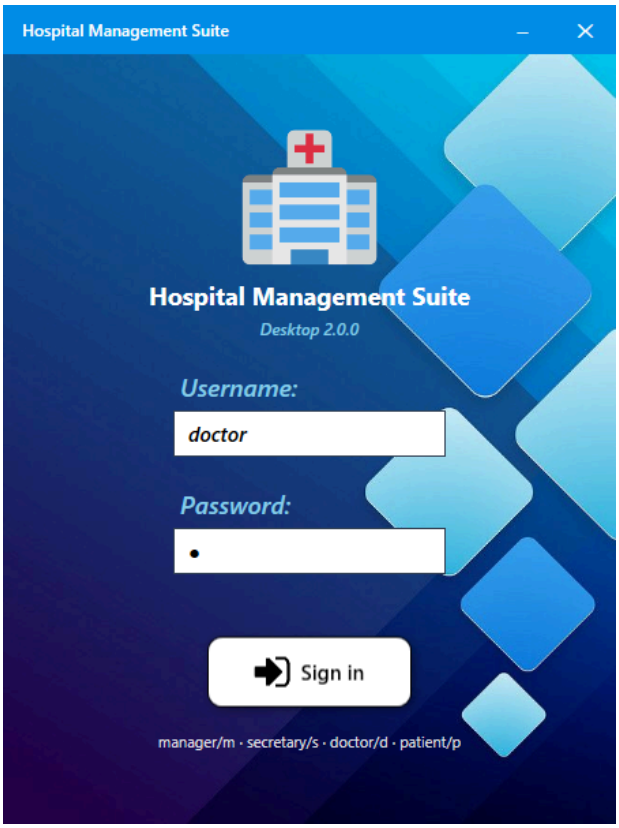

Figure 1. Desktop login — cyan field, EN/SR/HU switcher, demo accounts.

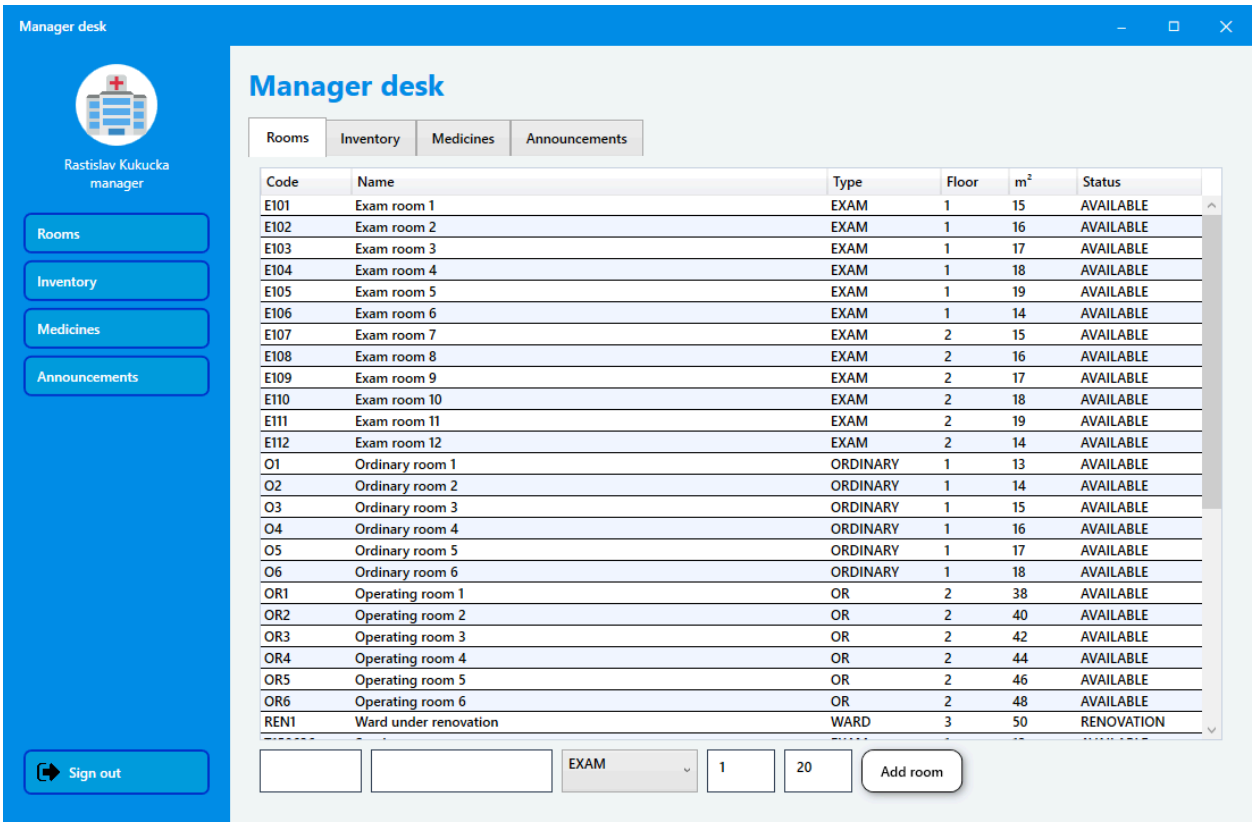

Figure 2. Manager desk — rooms, inventory, medicines, announcements.

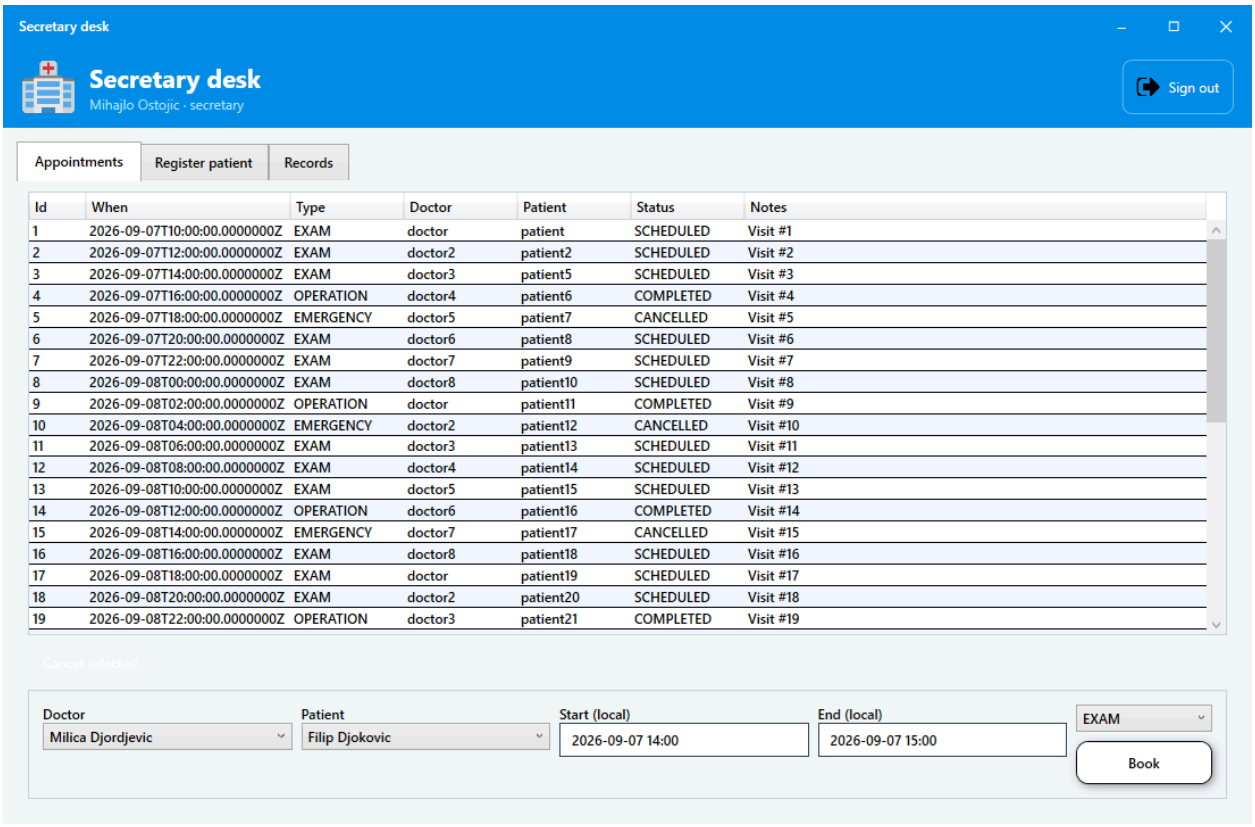

Figure 3. Secretary desk — appointments and patient register.

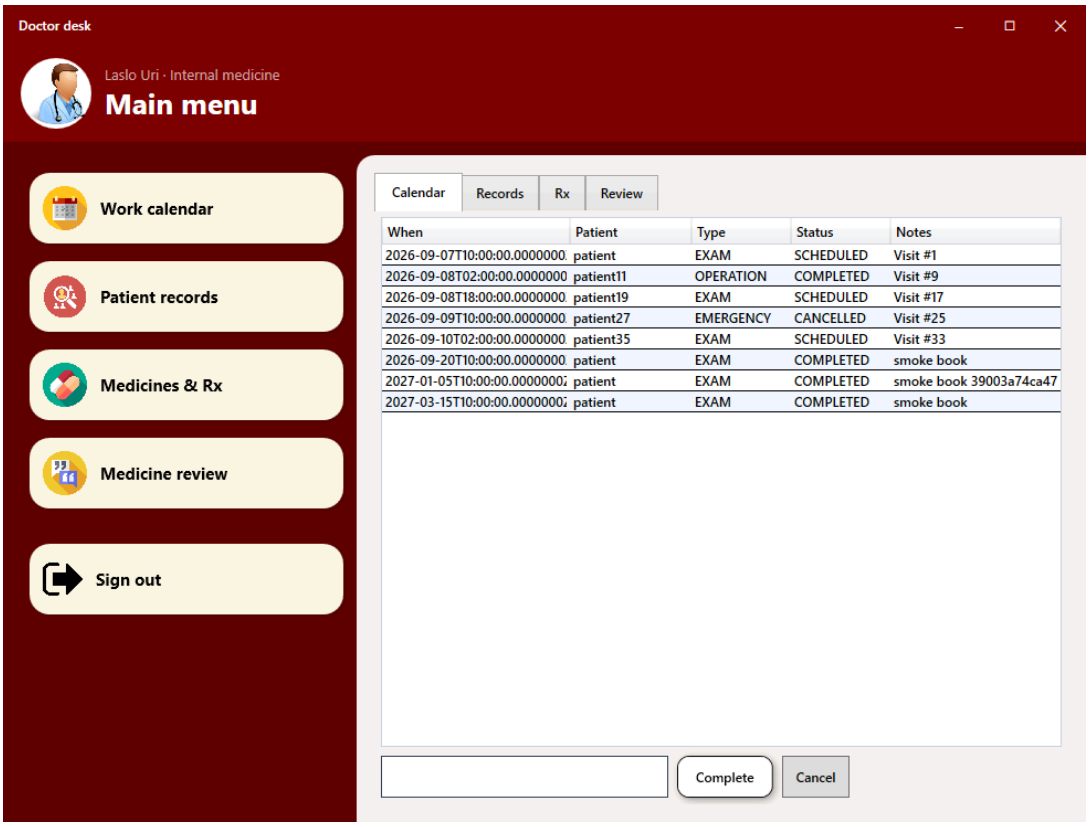

Figure 4. Doctor desk — burgundy shell, calendar and medicine review.

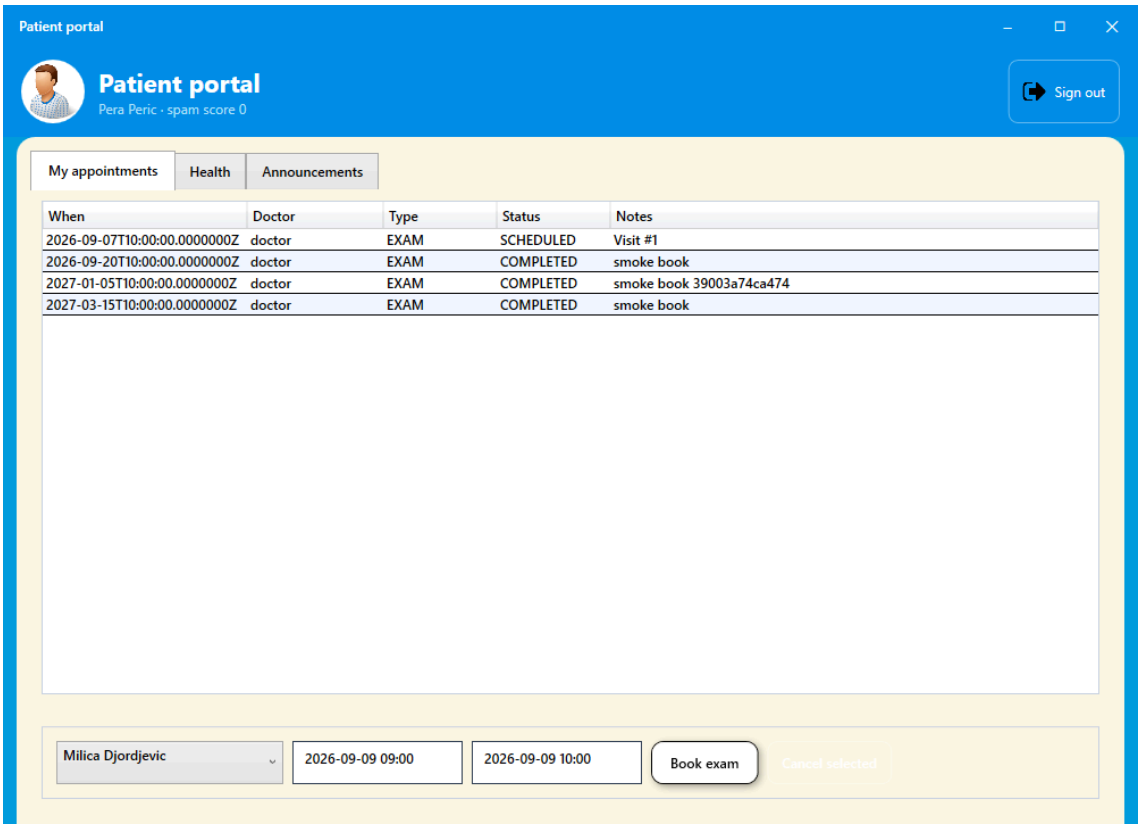

Figure 5. Patient desk — own appointments and notifications.

6. User interface — web 2.0.0

Screens captured from Next.js against a local production build on 7 September 2026.

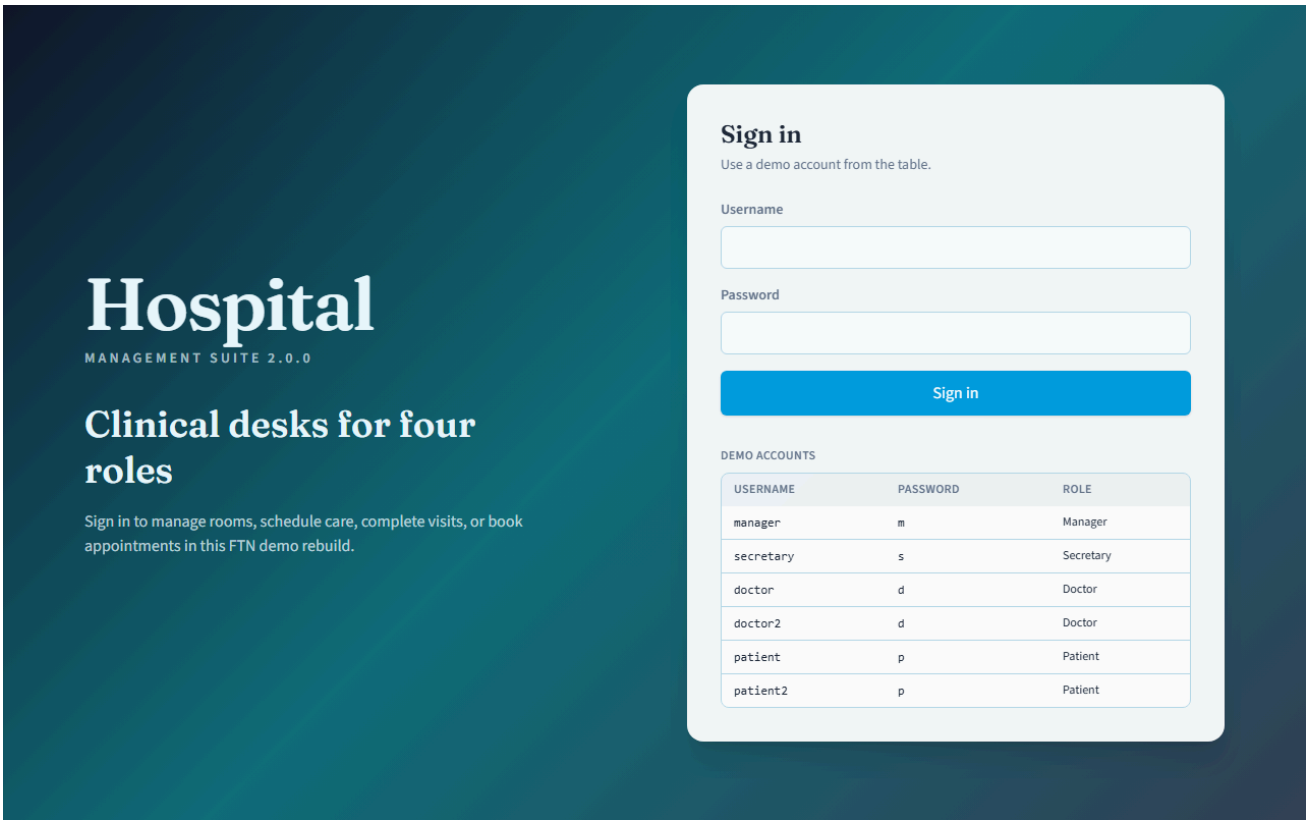

Figure 6. Web login — same brand colours and language switcher.

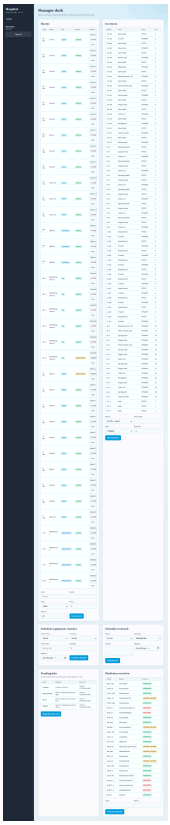

Figure 7. Manager web desk — facility, jobs, inventory, medicines.

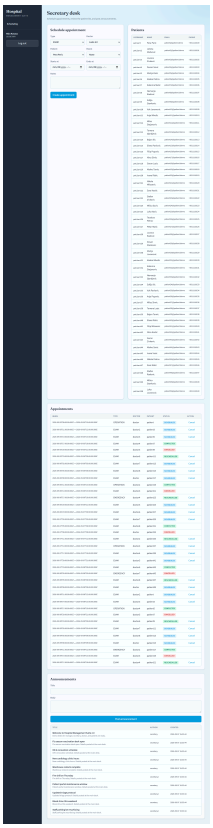

Figure 8. Secretary web desk — schedule and communications.

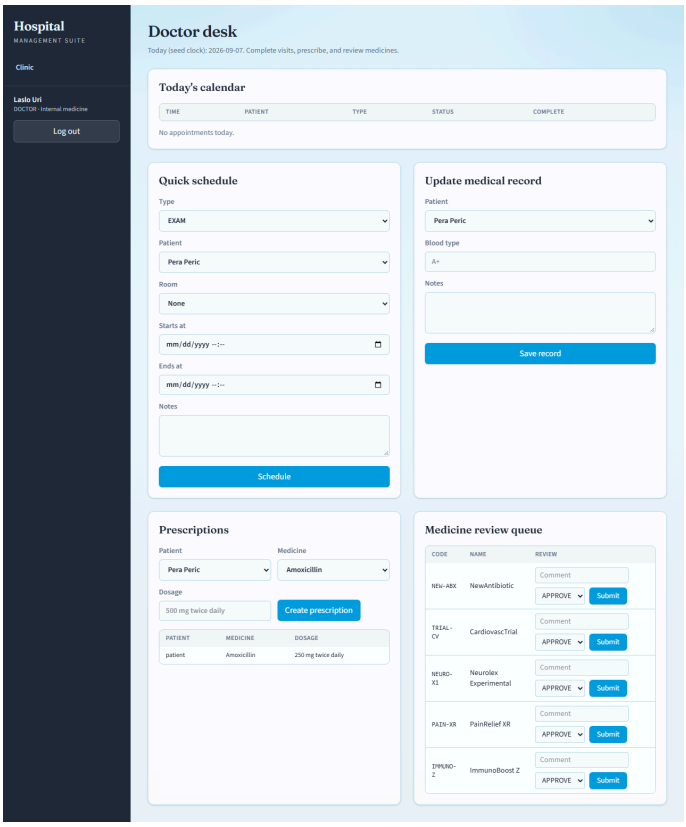

Figure 9. Doctor web desk.

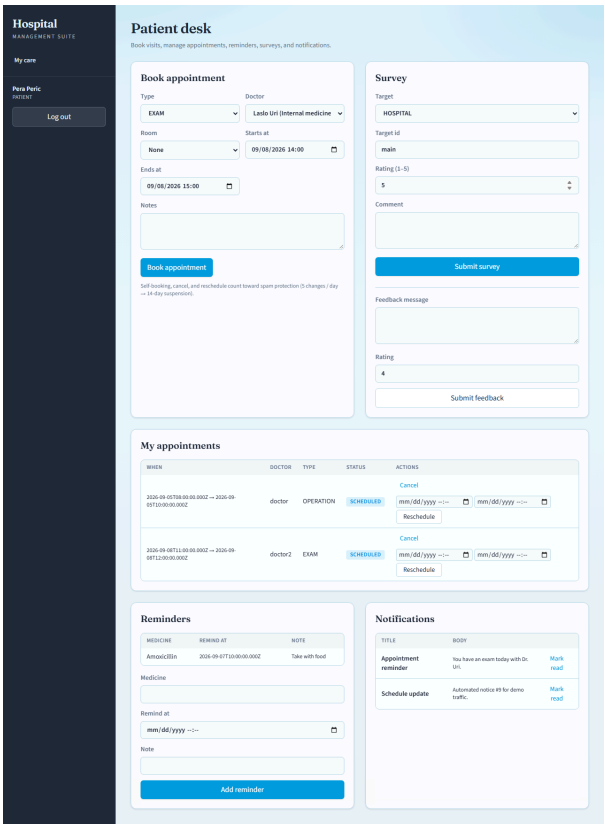

Figure 10. Patient web desk.

7. Architecture

Area	Path
Web routes	`app/src/app/`
Domain	`app/src/domain/`
Database (web)	`app/src/db/`
Auth / jobs	`app/src/server/`
i18n (web)	`app/src/i18n/`
Desktop UI	`desktop/HospitalDesktop/` (role windows, `Ui/`, `I18n/`)
Desktop data	`desktop/HospitalDesktop/Data/`
Legacy freeze	`_legacy-1.0.0/`

Browser or WPF client → app layer → SQLite. Role guards on web mutations; desktop windows open after successful login only.

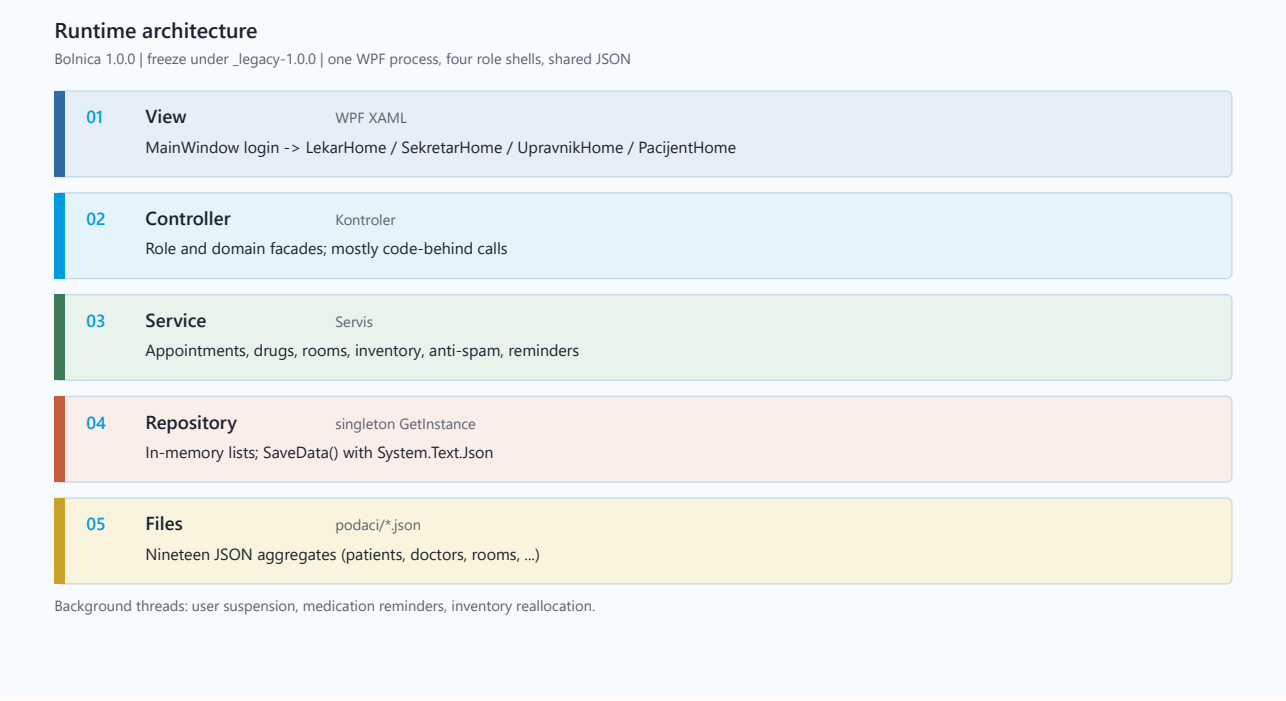

Figure 11. Legacy 1.0.0 layering (controllers → services → JSON). 2.0.0 keeps the same roles, replaces JSON with SQLite and splits web vs desktop clients.

8. Persistence and seed

Seed version **2** auto-reseeds when the stored version differs. Volume is roughly 10× the first 2.0.0 seed: on the order of ~60 users, ~37 rooms, expanded inventory, medicines, appointments, and announcements.

Demo passwords (unchanged): `manager` / `m`, `secretary` / `s`, `doctor` / `d`, `patient` / `p`.

9. Security and localization

Web: hashed passwords, POST login, httpOnly sessions, role-scoped pages and actions. Desktop: local demo auth for the course exercise (not a networked HIS).

UI strings: English, Serbian, Hungarian via cookie (web) and in-process locale (desktop). 1.0.0 Bolnica remains Serbian-only by design.

10. Build check

```
cd app
npm install
npm run db:reset
npm run check
npm run build

cd ../desktop/HospitalDesktop
dotnet build -c Release
dotnet run -c Release -- --smoke
```

Launchers at the repo root: `run-1.0.0.bat`, `run-desktop-2.0.0.bat`.

11. Closing

Develop inside `app/` and `desktop/HospitalDesktop/`. Leave `_legacy-1.0.0/` as the historical freeze. Later options: closer 1.0.0 feature parity (vacations, hospitalizations, referrals), shared schema package, HTTPS deploy of the web desk.
